A. Content & Audience

1. **Did your peers clearly understand your site's purpose and target audience?**

   Yes, my peers understood that Party Ledger is a website designed to help Dungeons and Dragons players to organize and store information about their campaigns.

2. **What suggestions did they make to improve your site's content or messaging?**

   My peer mentioned that some sections looked like placeholders that would eventually be filled with information. I could improve this by adding more content and making the different features more useful.

B. Design & User Experience

3. **How did your peers respond to your site's design (layout, color, typography, or organization)?**

   My peers really like the overall design of my website. They said the colors worked well together and that the website looked clean. However, they noticed that some text was too close to the edges of the page.

4. **Did they find the design effective in communicating your message and engaging users?**

   Yes, my peer said that the logo and title as well as the campaign dashboard immediately caught their attention. I think this shows that the design does a good job of showing visitors what the website is about.

C. Functionality & Performance

5. **What issues did your peers identify with features or interactivity on your site?**

   My peer mentioned that some features were still placeholder and didn't have much functionality yet. They also noticed that the navigation links became too spread out when the screen was smaller.

6. **Did they note any pages or elements that loaded slowly or inconsistently across devices or browsers?**

   My peers didn't mention any loading issues. However, they noticed that the navigation bar didn't display properly on a smaller screen which made the links look awkwardly spaced.

D. Accessibility & Usability

7. **What feedback did you receive about accessibility (e.g., alt text, color contrast, keyboard navigation)?**

   My peer didn't mention any specific problem with alt text or color contrast and keyboard navigation. However, they pointed out that some text was too close to the edge of the screen which could make the website harder to read.

8. **What can you improve to make your site more inclusive and user-friendly?**

   I could definitely improve the spacing around the text so it doesn't touch the edge of the screen. I could also fix the navigation bar so the links stay organized and easy to use on smaller devices.

E. Action Plan

9. **What did your peers like most about your site?**

   My peers liked the overall appearance of my website the most. They said the website looked clean, the colors complemented each other, and the logo and campaign dashboard stood out the most.

10. **What two improvements will you make based on their feedback, and how will you implement them?**

    The first improvement I will make is adding more padding and margins around the content so the text isn't so close to the edges. The second improvement will be fixing the navigation bar on the smaller screens by adjusting the CSS so the links stay properly spaced and organized.
