

Tavern Connect

A product pitch by Brady Jarvie

The Problem

This website solves a classic Dungeons and Dragons issue of players consistently forget who has what item, what they need to do, or where they are going.

Your Solution

This website allows multiple users (specifically in the context of Dungeons and Dragons) to have a shared dashboard where they can input information that they collect over the course of a campaign.

Website Type

This product would likely be considered a portal, as it is a private work space for a Dungeons and Dragons group.

This is the best format to use since all other types of website can't be private and have multiple people collaborating at one time.

Software Development Process

I believe that the agile method would work best for this website. The Agile method allows for the website to be tested by users and once they give their reviews, it would be changed to then form a final product.

Target Audience

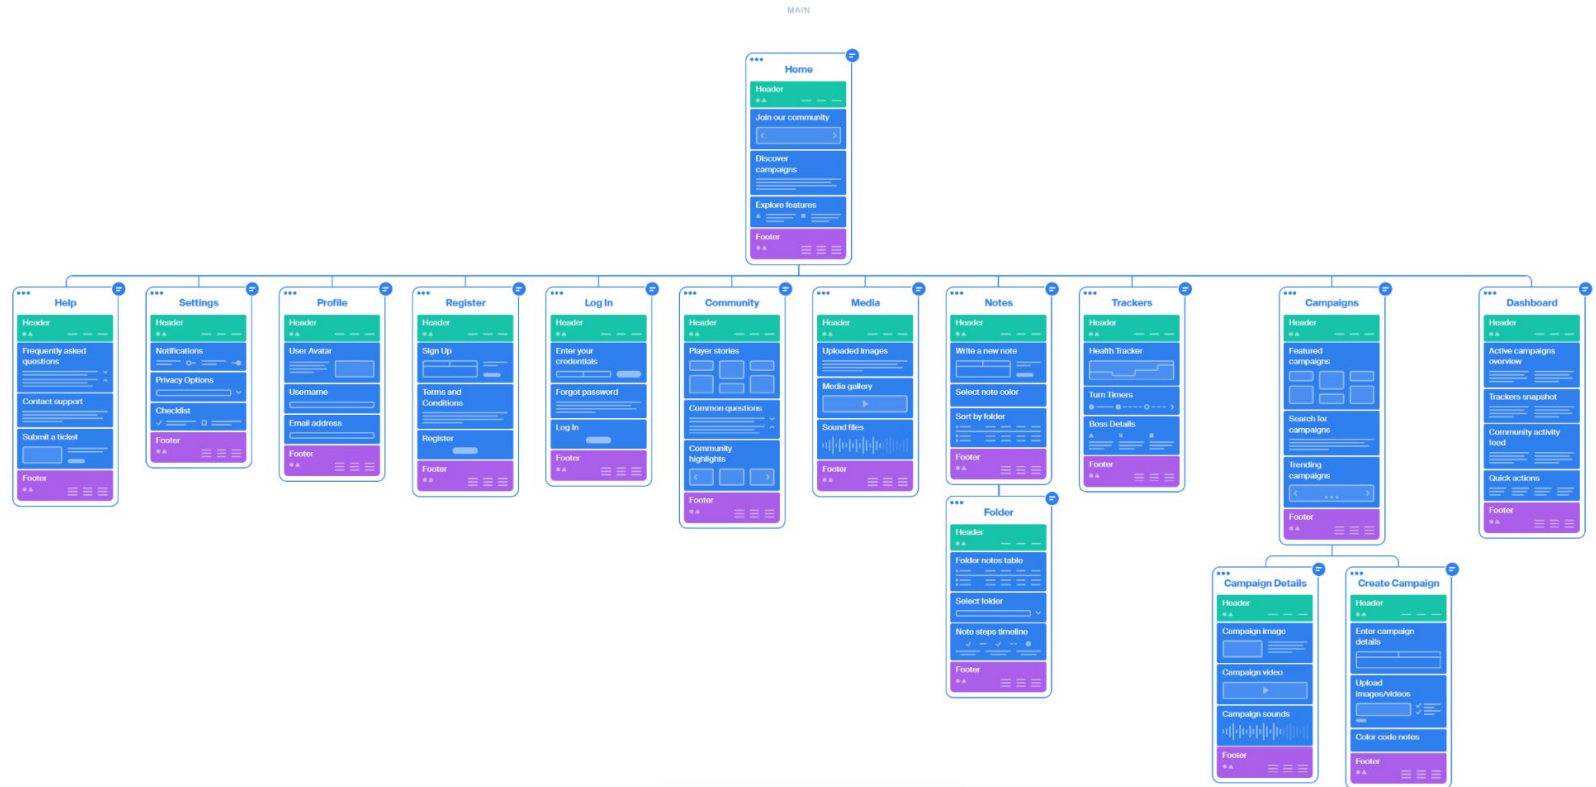

Name	Jake - New Player	Sarah - Experienced Player	Marcus - Dungeon Master
Age	19	27	34
Gender	Male	Female	Male
Location	Providence, RI	Boston, MA	Hartford, CT
Occupation	College Student	Graphic Designer	Software Developer
Income	\$15,000/year	\$65,000/year	\$95,000
Web use	Daily; uses phone/laptop for school, gaming, Discord, and YouTube	Daily; uses web for work, social media, gaming, and D&D research	Heavy web user; uses online tools, spreadsheets, Discord, and gaming resources
Why they visit	Track inventory and remember what happened during the last session	Organize inventory, quests, NPCs, locations, and campaign notes in one place	Track campaign information and share important information with players

Key Content & Features

Visitors will be able to have multiple tabs inside folders of which they can name and color code in a drop down menu on the left hand side. They will also be able to insert image, videos, and upload music/sound files.

There will also be trackers of any sort (Health, turn timers, boss details, etc)

Site Map

Wireframe

Insert a wireframe of your homepage.

- Show layout of header, navigation, content blocks, footer
- Focus on what goes where, not design details
- Complete this step manually on paper, using [draw.io](#) or with AI tools ([Uizard](#), [Figma with AI plugins](#))

Pitch Summary

Personally, as someone who plays Dungeons and Dragons, this is a tool that I would like to see in the world right now. The key benefits are the accessibility for everyone. The user doesn't even have to necessarily be a Dungeons and Dragons player. An easy to use note taking app where you can customize your own folders and use it collaboratively with others is something anyone could take advantage of. I think there is a huge market out there for something like this which can put together everything a player might need all in one website.

Feedback Questions

Include any specific areas where you'd like peer or instructor feedback.

- Is the solution clear?
- Are the features too much/little?
- Is the target audience well-defined?
