

Define Your Product

1. What problem does your product website solve or address?

Dungeons and Dragons players forget who has what item, what they need to do, or where they are going.

2. What is your product idea? How does your website support this idea and help solve the problem?

This website/app would be a shared dashboard between the party where they can enter their inventory, write down quests, NPC relationships, clues, locations, etc.

3. What type of website are you building? (i.e., e-commerce, brochure, portfolio, media, nonprofit, etc.)

A Portal

4. What is your mission statement? Summarize what your product does, who it's for, and why it matters.

My mission is to streamline how Dungeons and Dragons players organize and share information about their campaign by providing an easy to use platform designed specifically for their needs.

Profile of Target Audience

Who is the primary audience that your product is trying to reach? Include the following details about your target audience:

Demographics:

1. What is the age range of your target audience?

Ages 16 and up

2. What is the gender distribution?

Equal

3. Which country do your visitors live in?

United States

4. Do they live in urban or rural areas?

Any

Socioeconomic Details

1. What is the average income of visitors?

Likely low to middle income, around \$20,000–\$60,000 per year

2. What level of education do they have?

Primarily high school students/graduates and current college students/graduates

3. What is their marital or family status?

A mix but most likely single young adults or without children

4. What is their occupation?

Young working professional or students

5. How many hours do they work per week?

Roughly 20-40 hours a week depending if they're a student, working full time, or part-time

Web Behavior

1. How often do they use the web?

Daily, mostly for entertainment, communication, school/work, and D&D resources

2. What kind of device do they use to access the web?

Primarily desktop/laptops but could also use smartphones or tablets

1. Create a chart with at least three fictional visitors from your target audience. This chart should include at least their name, sex, age, location, occupation, income and web use. You can create this chart manually or with AI tools like [ChatGPT](#).

Name	Sex	Age	Location	Occupation	Income	Web Use
Alex Carter	Male	20	Boston, MA	College Student / Part-Time Retail	\$18,000/year	5–7 hours/day, mostly laptop and phone
Maya Rodriguez	Female	24	Providence, RI	Graphic Designer	\$48,000/year	6–8 hours/day, mostly desktop and phone
Ethan Miller	Male	28	Hartford, CT	Software Developer	\$72,000/year	8–10 hours/day, mostly desktop and laptop

2. Create a list of reasons why people would be coming to your site and assign the list of tasks to the fictional visitors you created. You can complete this step manually or with AI tools like [ChatGPT](#).

Reasons People Would Visit the Site

- Record notes from a D&D session
- View notes written by other players
- Keep track of important NPCs and characters
- Track quests and objectives
- Record important locations
- Keep track of items and equipment
- Review information before the next session
- Share discoveries with the rest of the party
- Organize campaign information in one place

Tasks Assigned to Each Visitor

Visitor	Tasks They Would Use the Site For
Alex Carter	Record session notes, track quests, and check what the party needs to accomplish next.

Maya Rodriguez	Keep track of NPCs and locations, organize campaign information, and share discoveries with other players.
Ethan Miller	Track items and equipment, review other players' notes, and look over campaign information before the next session.

Website Requirements

By addressing the questions below, you'll gain valuable insights into how to design a website that meets your goals and expectations.

Purpose & Goals:

What is the primary goal of your website (i.e., promote a service, sell a product, educate users, raise awareness, etc.)?

The primary goal is to give D&D players an easy way to organize and track the information they collect from their campaign.

What is the most important action you want users to take on your site (i.e., sign up, purchase, read articles, submit a form, etc.)?

Users should be able to create or join a campaign and begin adding and sharing information with other players.

Content & Features:

What content and features are essential to help users achieve their goals? List critical pages and features (i.e., About, Contact Form, Product Gallery, FAQs, Reviews, etc.).

Essential features include: a shared campaign dashboard, personal user accounts, campaign notes, NPC and location tracking, quest tracking, and the ability to see the other information added by the other players

What will your homepage highlight? Think about the first impression and what visitors need to see right away.

The homepage will highlight the campaign dashboard and explain how the website makes organization and sharing campaign information much easier.

Look & Feel:

Do you have examples of websites that inspire your design? List 1–2 examples and what you like about them (i.e., layout, colors, interactivity, etc.).

vvd.world is my main inspiration. It is a note taking website specifically designed for a Dungeons and Dragons campaign and note taking but is more dedicated to the dungeon master instead of the players themselves and there isn't much of a way to share those notes to the players if need be. There is a dashboard with tabs on the lefthand side of the screen with a search bar which

allows for easy navigation. Then in the middle of the screen, it shows which tab/document you currently have opened and if there isn't one open, it gives you the option to create one or search for one. There are many other interactive options, you can create a timeline of your campaign, upload images or sound, or create a relation tree.

How would you describe the overall style of your site (i.e., modern, bold, minimalist, playful, professional, etc.)?

It would be more on the modern side that stays simple and organized with a slightly fantasy theme to it without making the design overly complicated.

Do you have preferences for color, fonts, or imagery? If not, what mood or personality do you want the site to convey?

I would allow the user to customize their own layout, including colors, font, and imagery. But to start with, I would use some darker colors, like red or purple with gold accents. The font should be easy to read but should also give that fantasy feeling to it which I would mainly use for the headings. Images and icons could include dice, maps, or examples of previously made dashboards that users could use as inspiration.

Design & Prototyping

In this final section, you'll bring together your ideas and planning to shape the visual direction of your product website. You'll document your design choices and development strategy through diagrams, sketches, and visuals that guide your build process.

SDLC Approach & Timeline

In your answer document, outline how you plan to build your website using the SDLC. Your plan should include:

SDLC Model: Agile

I would use the agile model since it would allow me to build the website in smaller sections and test each feature. Then I could make improvements throughout the development of the website.

Timeline:

Week 1 - Planning: Plan out the requirements for the website like features and overall goals.

Week 2 - Design: Create what I want the layout to look like, color scheme, navigation, and have a basic dashboard design.

Week 3-4 - Development: This is where I would build the main website and features like user accounts, adding campaigns, shared notes, NPC's, locations, and quests.

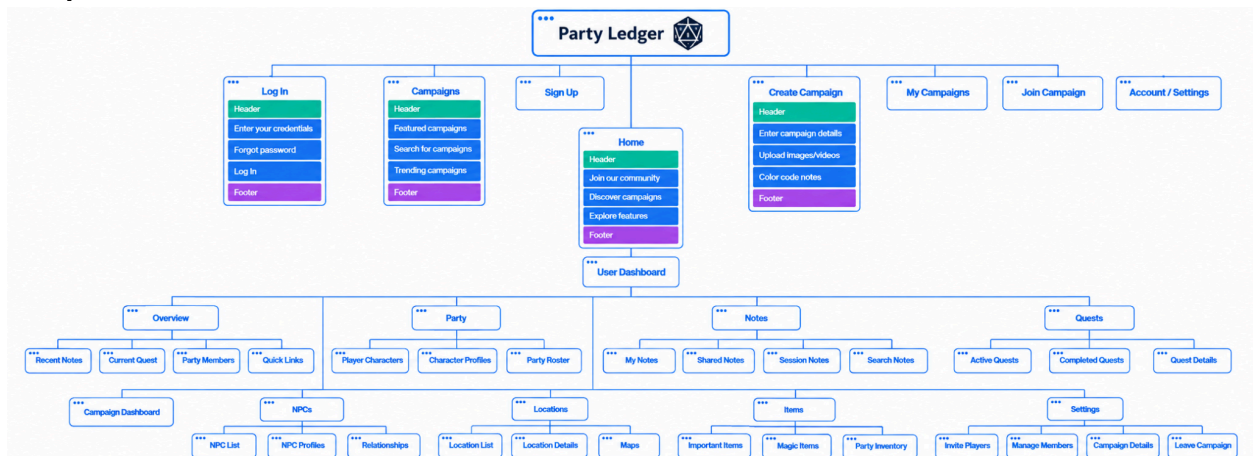

Week 5 - Testing: Test for bugs that may pop up, problems with the usability of it, and find the features that don't work correctly.

Week 6 - Improvements and Launch: Fix the problems found during testing and improve the design while preparing for the final version of the website.

Original Logo

Site Map

Wireframes

Design wireframes for your homepage and at least two other core pages. Your wireframes should:

<https://www.figma.com/make/82fFz1aoeUJq6lBmFv4DxC/Dungeons---Dragons-Campaign-Wireframe?t=xP0myb1ghBWhsV0v-20&fullscreen=1>

Accessibility

My website will use fonts that can be easily seen, have high color contrast, and adjustable text sizes for people who have visual impairments. The images and icons will include alt text for screen readers. Videos and audio will include captions or transcripts for those with hearing impairments. It will also support keyboard navigation and use large labeled buttons for users with motor impairments. Pages will use simple language and consistent layouts to help users with cognitive impairments. I will use tools like Google Lighthouse or WAVE to test the website for accessibility problems. I can also manually test keyboard navigation to make sure the website follows WCAG accessibility guidelines.
